

## What is the stainless steel strapping band?

### Introduction:

Stainless steel strapping band have higher corrosion resistance than other types of metal and plastic banding, which means they will survive longer in adverse environments. It is important to note that stainless steel strapping band of different grades perform better in harsh environments than others. Stainless steel strapping band is a wonderful product because of its versatile and durability. And it has a very high fracture strength, making it a perfect choice for heavier applications.

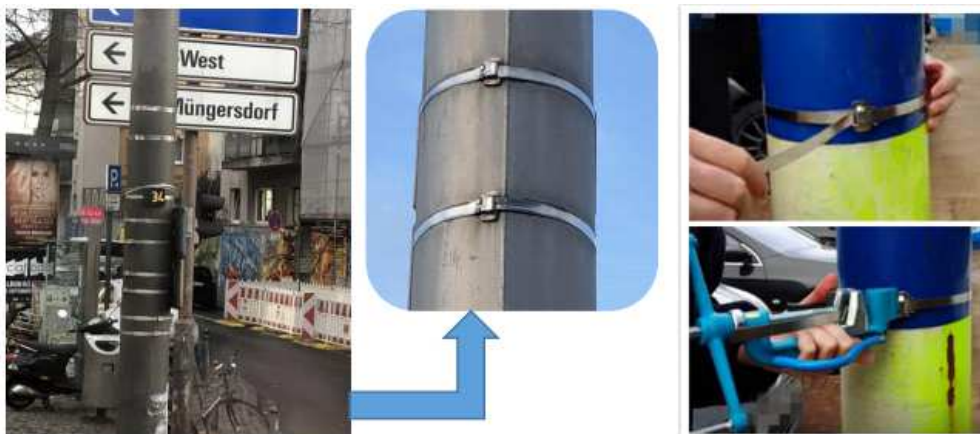

### Feature:

- ✧ Widely using- It is mainly used to tie cables, grounding wires, brackets, hanging plates on poles, etc. It is also suitable for electrified railways, telecommunications poles, traffic lights and signs and other departments.
- ✧ Choosing stainless steel strips can reduce maintenance and replacement costs both indoors and under seabed conditions.
- ✧ Stainless steel strips can be used for grades 201, 304 and 316, depending on the type of application required. Type 201 stainless steel strapping band has excellent yield strength and tensile strength to provide maximum clamping strength. Traffic sign. Type 304 stainless steel strapping band is the most commonly used and can be applied to almost any environment. Type 316 stainless steel strapping band is specially used in coastal cities or extreme corrosive environments, such as chemical plants or oilfields.

## How to use stainless steel strapping band?

### Application:

Fixed the stainless steel strapping band and buckle on the pole with banding tool.

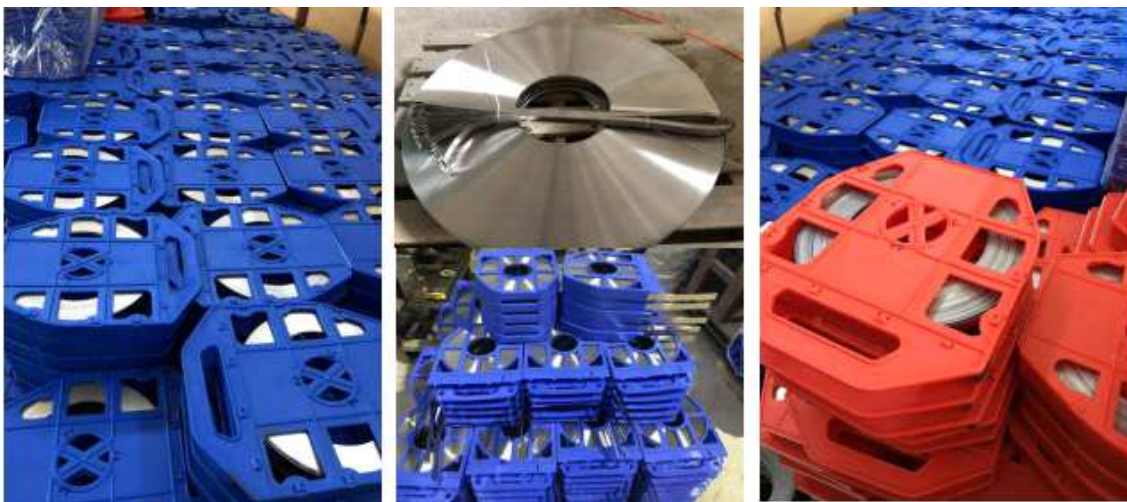

Secure outdoor signs, bundle cables and create custom clamps for hoses and duct work.

**Packing:**

Durable plastic tote dispensers and carton available.
